

Prostate Biopsy Report

REPORT DATE: 18/06/2026 | PAGE: 1 of 1

Patient Information Vance, David S. MRN: PN-88190-26 DOB: 03/11/1957 (69 Y) PSA Total: 9.80 ng/mL	Physician Dr. Henry Hegarty, MD Urology Department Clinic ID: URO-4412	TC Laboratory PathNet Main Facility Specimen: 12 Cores Accession: BX-99410	Pathologist Robert J. Colby, MD Urologic Pathology Lic: MD-882109
--	--	--	---

Result Summary	Cores Involved	Gleason Group	Perineural Invasion (PNI)	Extraprostatic Extension (EPE)
Malignant	6 (out of 12) cores	Group II (3+4=7)	Perineural invasion is identified.	No tumor in extraprostatic adipose tissue.

Critical Comment: Gleason 4 disease comprises 5% of total tumor volume and consists of poorly formed and fused glands. Max tumor involvement: 70% in Right Apex (Sample K). Prolaris molecular predictive test has been ordered.

Site	Microscopic Diagnosis	Gleason	PNI	% Involv	Length (mm)
A Left lateral base	Benign Prostatic Tissue	—	No	0%	11.1
B Left base	Benign Prostatic Tissue	—	No	0%	10.3
C Left lateral mid	Atrophy & Benign Stroma	—	No	0%	13.9
D Left mid	Benign Prostatic Tissue	—	No	0%	11.4
E Left lateral apex	Adenocarcinoma	3+3=6	No	20%	10.3
F Left apex	Benign Prostatic Tissue	—	No	0%	11.9
G Right base	Adenocarcinoma	3+3=6	Yes	4%	20.5
H Right lateral base	Benign Prostatic Tissue	—	No	0%	10.6
I Right mid	Adenocarcinoma	3+3=6	No	75%	11.9
J Right lateral mid	Adenocarcinoma	3+3=6	Yes	10%	14.8
K Right apex	Adenocarcinoma	3+4=7	No	70%	11.6
L Right lateral apex	Adenocarcinoma	3+3=6	Yes	20%	12.9
